CODING-AGENT SKILL · CLAUDE CODE · CODEX · & CO.

image-to-campaign.

From **one product image** to a complete marketing campaign — landing page, 3 Instagram Reels and a blog article, all in one consistent look.

> All you need: a coding agent (Claude Code, Codex, Cline, OpenCode ...) and a Higgsfield account with credits.

1 Get a Higgsfield account

Higgsfield generates every image and video. Create your account (credits required) and log in there:

higgsfield.ai/s/mcp-arnold-oberleiter-ecZvus

2 Clone the repo & ask your agent

Tell your coding agent, word for word:

```
"Clone the repo https://github.com/Arnie936/image-to-campaign-en into my skills folder and tell me what I need to do next."
```

The skill installs the Higgsfield CLI itself and walks you through the login — nothing to hunt down by hand.

Optional but recommended: install the Higgsfield companion skills first (better asset quality).

3 Image in → campaign out

Give the agent a product image and say:

```
"Turn this image into a complete campaign."
```

First you get a **Brand Brief to approve** (no credits spent yet). After your OK the agent builds everything on its own and saves it in one campaign folder.

WHAT YOU GET — **Landing page · 3 Reels (9:16) + captions · Blog article** — one identity, one funnel
